

Work Order to AWS Professional Services Master Services Agreement

Work Order for Telstra Limited and Telstra - AWS Agentic Framework (TAAF)

This Work Order is entered into between the entities specified in the table below. This Work Order is made a part of the Master Services Agreement made on January 12, 2018 between Amazon Web Services, Inc. and Versent Pty Ltd governing the provision of the Services (the “**Agreement**”). This Work Order is effective as of the date the last party signs this Work Order (the “**Work Order Effective Date**”). Capitalized terms used in this Work Order may be defined below or in the Agreement.

AWS Contracting Entity (“AWS”)	Amazon Web Services Australia Pty Ltd
Provider Contracting Entity (“Provider”)	Versent Pty Ltd
Customer	Telstra Limited
Project Name	Telstra - AWS Agentic Framework (TAAF)
Premises	Melbourne, Victoria Australia

1. Description of the Services

Partner with AWS will provide consulting and advisory services to assist Customer with designing and deploying a generative AI and multi-agent framework in Customer's non-production environment (the “**In-Scope Framework**”), designed to support application modernization, automated operations, and decision-making across their enterprise portfolio.

Partner will work with AWS to advise and assist Customer with the following activities, in a non-production environment:

- Facilitate discovery workshops (where the quantity and duration are to be mutually agreed between AWS and Customer) to assess current application portfolio, infrastructure, and operational processes designed to establish modernization requirements
- Define and document requirements and advise on AWS general best practices for designing multi-tenant platform architecture with integrated AI capabilities, incorporating Customer-selected use cases and modernization priorities
- Design and deploy generative AI-enabled modernization patterns for application assessment, migration planning, and automated lifecycle management tailored to Customer-specified use cases
- Review current state architecture and developing target state blueprints (where the quantity is to be mutually agreed between AWS and Customer) incorporating microservices, Application Programming Interface (API) modernization, and cloud-native patterns

- Document decisions across technology stack selection, security frameworks, operational models, and governance structures
- Deploy the In-Scope Framework multi-agent components in Customer's non-production environment with Development Operations (DevOps) agents, security agents, and application modernization agents
- Deploy and configure the AWS Security Agent and assist Customer's security engineering team to upload up to thirty (30) Customer security baseline rules as AWS Security Agent requirements
- Define and document Cloud Center of Excellence (CCoE) operating model with standardized processes, templates, and automation workflows
- Configure Amazon Bedrock and Claude Code (a third-party solution) integration for intelligent code analysis, vulnerability assessment, and modernization recommendations
- Deploy self-service capabilities in Customer's non-production environment designed to enable development teams to provision resources and deploy applications following governance policies
- Create automated assessment and categorization processes for application portfolio analysis using AI-powered evaluation frameworks
- Design security governance model with automated logging and monitoring, vulnerability management, and policy enforcement
- Develop standardized Infrastructure-as-Code (IaC) templates (where the quantity is to be mutually agreed between AWS and Customer), designed for repeatable deployment patterns across different application types

Non-Production Use Cases:

Partner working with AWS will provide assistance, based on AWS general best practices, to deploy the following mutually agreed pilots to Customer's non-production environment during the engagement (collectively, the **"In-Scope Use Cases"**):

- Migrate one (1) application's connectivity from Customer's current Transit VPC connectivity pattern to Customer's existing AWS Transit Gateway, including certificate enrollment automation
- Migrate One (1) application from Customer's Landing Zone "Customer Enablement" (CE) to Customer's Landing Zone "Application Microservices Platform" (AMP)
- Perform one (1) application of the Java (a third-party solution) or AWS Lambda runtime upgrade
- Conduct an AWS DevOps Agent pilot with the Customer's AMP team and an application team, designed to enable role-based access control structure for the AWS DevOps Agent's use, based on AWS general best practices
- Conduct AWS Security Agent design review, code review and security testing functionality with one (1) application in Customer's non-production environment

Deliverables

Partner will provide the following deliverables to AWS during the engagement (**"Deliverables"**):

Documents:

- Implementation guide for deploying and operating the In-Scope Framework
- Architecture diagrams documenting target state design, including multi-tenant platform components, AI integration points, and security boundaries

- Runbooks for operational activities including agent management, environment maintenance, and troubleshooting procedures
- Application portfolio assessment framework with AI-powered categorization and modernization pathway recommendations customized for the use cases.
- CCoE operating model documentation defining roles, responsibilities, governance processes, and decision frameworks
- Security framework documentation including logging/monitoring processes and automated governance policies

Code and Software

- As is, unsupported sample code and configuration files for deployed proof-of-concept agents and In-Scope Framework components
- As is, unsupported IaC templates for standardized deployment patterns supporting different migration strategies.

Change Management. In providing the Services, Provider will:

1. Document and communicate any Changes via a change management tool specified in writing by the engagement lead identified by AWS (the “**Engagement Manager**”). If no tool is specified, documentation of any Changes must be through a mechanism mutually agreed upon with the Engagement Manager. For purposes of this Section, Changes are (i) any revisions, edits, modifications, configurations, or improvements to existing software, code, templates, or scripts, (ii) the provision of new software, code, templates, or scripts, (iii) changes, modifications, or configurations within an AWS or Customer environment or AWS Account, and (iv) any other similar revisions, edits, modifications, configurations, or improvements Provider makes in performing the Services under this Work Order. Changes include manual changes made via the AWS console, application programming interface (API), or deployment tooling approved by the Engagement Manager.
2. Plan implementation of any Change in coordination with the Engagement Manager and implement rollback procedures to minimize disruption.
3. Test all Changes in a logically-segregated, development, testing, staging or non-production environment, with no public access to the internet.
4. Complete an AWS led peer-review of the Change. The review will include a detailed code review, a deliverable security review, and a review of any potential business impact.
5. Prior to making any Change, obtain written approval from the Engagement Manager.

2. Service Fees and Expenses

The currency for Service Fees and Expenses is: Australian dollars (\$).

<i>Resource Level/Role</i>	<i>Hourly Rate</i>	<i>Number of Hours</i>	<i>Cost</i>
Pr. Engineer	\$250	1,040	\$260,000
Pr. Consultant	\$285	640	\$182,400
Staff Consultant	\$242	1,320	\$319,440
Total – Not to Exceed		3,000	\$761,840

No Expenses will be billed to AWS under this Work Order.

3. AWS Professional Services Engagement Management Process

Services will be managed by AWS through PSA Communities, an online cloud-based professional services management solution. AWS will provide Provider with access to PSA Communities, along with instructions for using PSA Communities. Provider will:

- 3.1** Complete weekly time and expense entry through PSA Communities for Services and Expenses (if permissible) rendered under this Work Order. Provider will not submit entries for time or expenses for AWS approval into PSA Communities prior to completing such Services or incurring such Expenses. AWS may require physical copies of expense receipts at time of submission through PSA Communities. Time and Expense entry will be validated by AWS through PSA Communities. AWS will reject time and expense entries that have errors, omissions, or missing supporting documentation; and
- 3.2** Invoice AWS through PSA Communities for AWS-approved Services and Expenses rendered under this Work Order within 60 days of such Services and Expenses being incurred. Provider will invoice only for Services and Expenses approved by AWS through PSA Communities. Submission of invoices with errors, omissions, or missing supporting documentation may result in delay of payment by AWS for such Services and Expenses.

4. Additional terms

- 4.1** Provider will not make any AWS Information internet accessible. Provider will not make any system configurations to Customer's environments, AWS Accounts, endpoints, or devices that would cause AWS Information to become internet accessible.
- 4.2** Provider will implement and maintain appropriate security measures, as set forth in the AWS Provider Security Policy. "AWS Provider Security Policy" means AWS's provider security policy

available at <https://aws.amazon.com/legal/aws-professional-services-provider-security-policy> (and any successor or related locations designated by AWS), as updated from time to time.

4.3 Notwithstanding anything to the contrary in the Agreement:

- a) Provider will not further subcontract or delegate any of its obligations under this Work Order to any individual or entity who acts as a subcontractor, independent contractor, or delegate of Provider (together, "**Third-Party Contractor**");
- b) Without limiting any other remedy that AWS may have under the Agreement, this Work Order, or at law or in equity, Provider's breach of this Additional Term will constitute a material breach of the Agreement and Provider will defend, hold harmless, and indemnify AWS, Customer, and their respective affiliates, directors, officers, employees, agents, successors and assigns (the "**Indemnified Parties**"), from and against any Losses incurred by the Indemnified Parties arising from or related to any acts or omissions by any Third Party Contractor. This indemnity obligation will be subject to the process established under Section 13.2 (Process) of the Agreement. This indemnity obligation will not be subject to the limitations imposed under Sections 14.1 (Exclusion of Consequential Losses) or 14.2 (Cap on Liability) of the Agreement; and
- c) Provider will not bill AWS for Services performed by an unauthorized Third-Party Contractor ("**Unauthorized Work**"), and AWS can at its election (i) not pay, or receive a refund or credit (to the extent AWS has made any payments) for such Unauthorized Work, and/or (ii) terminate this Work Order upon immediate notice to Provider."

4.4 Provider confirms that any Personnel performing Services under this Work Order have passed all background checks or similar screening requirements to the extent required by the Agreement.

4.5 Provider must test all Deliverables prior to delivery to AWS to confirm they conform to the terms and conditions of the Agreement and this Work Order and any agreed upon specifications and descriptions. Provider will not submit any Deliverables directly to Customer (including, but not limited to, samples, examples, scripts, configuration files, documents with implementation guidance, etc.). Provider will submit all Deliverables to the Engagement Manager for review and approval.
